Overview

Our project management services focuses on providing leadership and guidance to our teams on client engagements. Our project managers are PMP certified and manage project efforts according to PMI's Project Management Body of Knowledge (PMBOK). We combine this knowledge with our expertise in technology to provide sound management principles with the most appropriate technologies to help project deliver the intended results.

Solutions

K3 Solutions' project managers and leads provide strategic guidance and work collaboratively with our customers to ensure projects are executed efficiently, on time and on budget. Our services include:

- **Project Planning and Scope Management**—we work with our customers to define all the work elements that are required to be completed on the project and ensure that all of the work is done according to the project plan. We utilize these processes to deliver the products and services exactly the way the customer asked for.
- **Risk Management**—we work with our customers to identify and analyze risks that can impact project outcomes. We define and implement an effective risk management strategy to avoid, mitigate, or transfer each risk identified in the registry.
- **Cost Management**—we work with our customers to derive cost estimates according to project requirements. We then use earn value management techniques to analyze active project engagements to measure project performance against the intended baseline. We use these processes to determine the correct course of management action to ensure project success.
- **Quality Management**—we ensure policies and procedures are followed correctly, which enables projects to meet their defined goals.

Benefits

Our comprehensive project management approach results in the following:

- **Cost** – project deliveries that are on budget; reductions in the cost to deliver quality software and services;
- **Schedule**—reductions in release delivery time; increases in the percentage of milestones met on time; increased accuracy of estimating efforts
- **Quality**—reduced number of defects; project results that actually meet business needs
- **Customer Satisfaction**—increased satisfaction due to successful project delivery
